

Key Benefits

Multi-layered protection

Malwarebytes Multi-Vector Protection (MVP) uses a seven layered approach, including both static and dynamic detection techniques, to protect against all stages of an attack. This approach provides protection against all types of threats from traditional viruses to tomorrow's advanced threats.

Visibility into endpoints for continuous monitoring

Flight Recorder provides continuous monitoring and visibility into Windows desktops for powerful insights. You can easily track file system activity, network activity, process activity, and registry activity. Flight Recorder events are stored both locally and in the cloud.

Three modes of endpoint isolation

When an endpoint is compromised, Malwarebytes stops the bleeding by isolating the endpoint. Fast remediation prevents lateral movement. Malware is stopped from phoning home, and remote attackers are locked-out. Endpoint Protection and Response is the first product to offer three ways to isolate an endpoint. Network Isolation to restrict which processes can communicate. Process Isolation to restrict which processes can run. Desktop Isolation to alert the end user and halt interaction. Safely keeps the system online for detailed analysis.

Complete and thorough remediation

Malwarebytes delivers the industry's most trusted remediation, as evidenced by 500,000 downloads and remediation of 3 million infections per day around the globe. Malwarebytes Endpoint Protection and Response leverages proprietary Linking Engine technology to remove all traces of infections and related artifacts—not just the primary threat payload. This approach saves time normally spent wiping and re-imaging endpoints.

Ransomware Rollback

Ransomware Rollback technology allows you to wind back the clock to negate the impact of ransomware by leveraging just-in-time backups. Malwarebytes logs and associates changes with specific processes. Every change made by a process is recorded. If a process does 'bad' things you can easily roll back those changes to restore files that were encrypted, deleted, or modified. Data storage is minimized using proprietary dynamic exclusion technology that learns what 'good' applications do.

Centralized cloud-based management

This reduces complexity, making it easy to deploy and manage, regardless of the number of endpoints. Additionally eliminates the need to acquire and maintain on-premises hardware.

Malwarebytes is a cybersecurity company that millions worldwide trust. Malwarebytes proactively protects people and businesses against malicious threats, including ransomware, that traditional antivirus solutions miss. The company's flagship product uses signature-less technologies to detect and stop a cyberattack before damage occurs. Learn more at www.malwarebytes.com.
